**WORKSHEET: WATER
STATES**

The States of Water

Water is important for all life on earth. Water is a solid when it is cold, at 0°C, it is called ice. When we heat ice it turns to liquid, this is called water, then when we heat it even more, it turns to gas, this is called vapour. This process of changing state is very important for life.

Match the states of water to the name:

SOLID		RAIN
LIQUID		VAPOUR
GAS		ICE
